

# museums and the internet

MAI-Tagung 14./15. Mai 2018 Museum Barberini, Potsdam

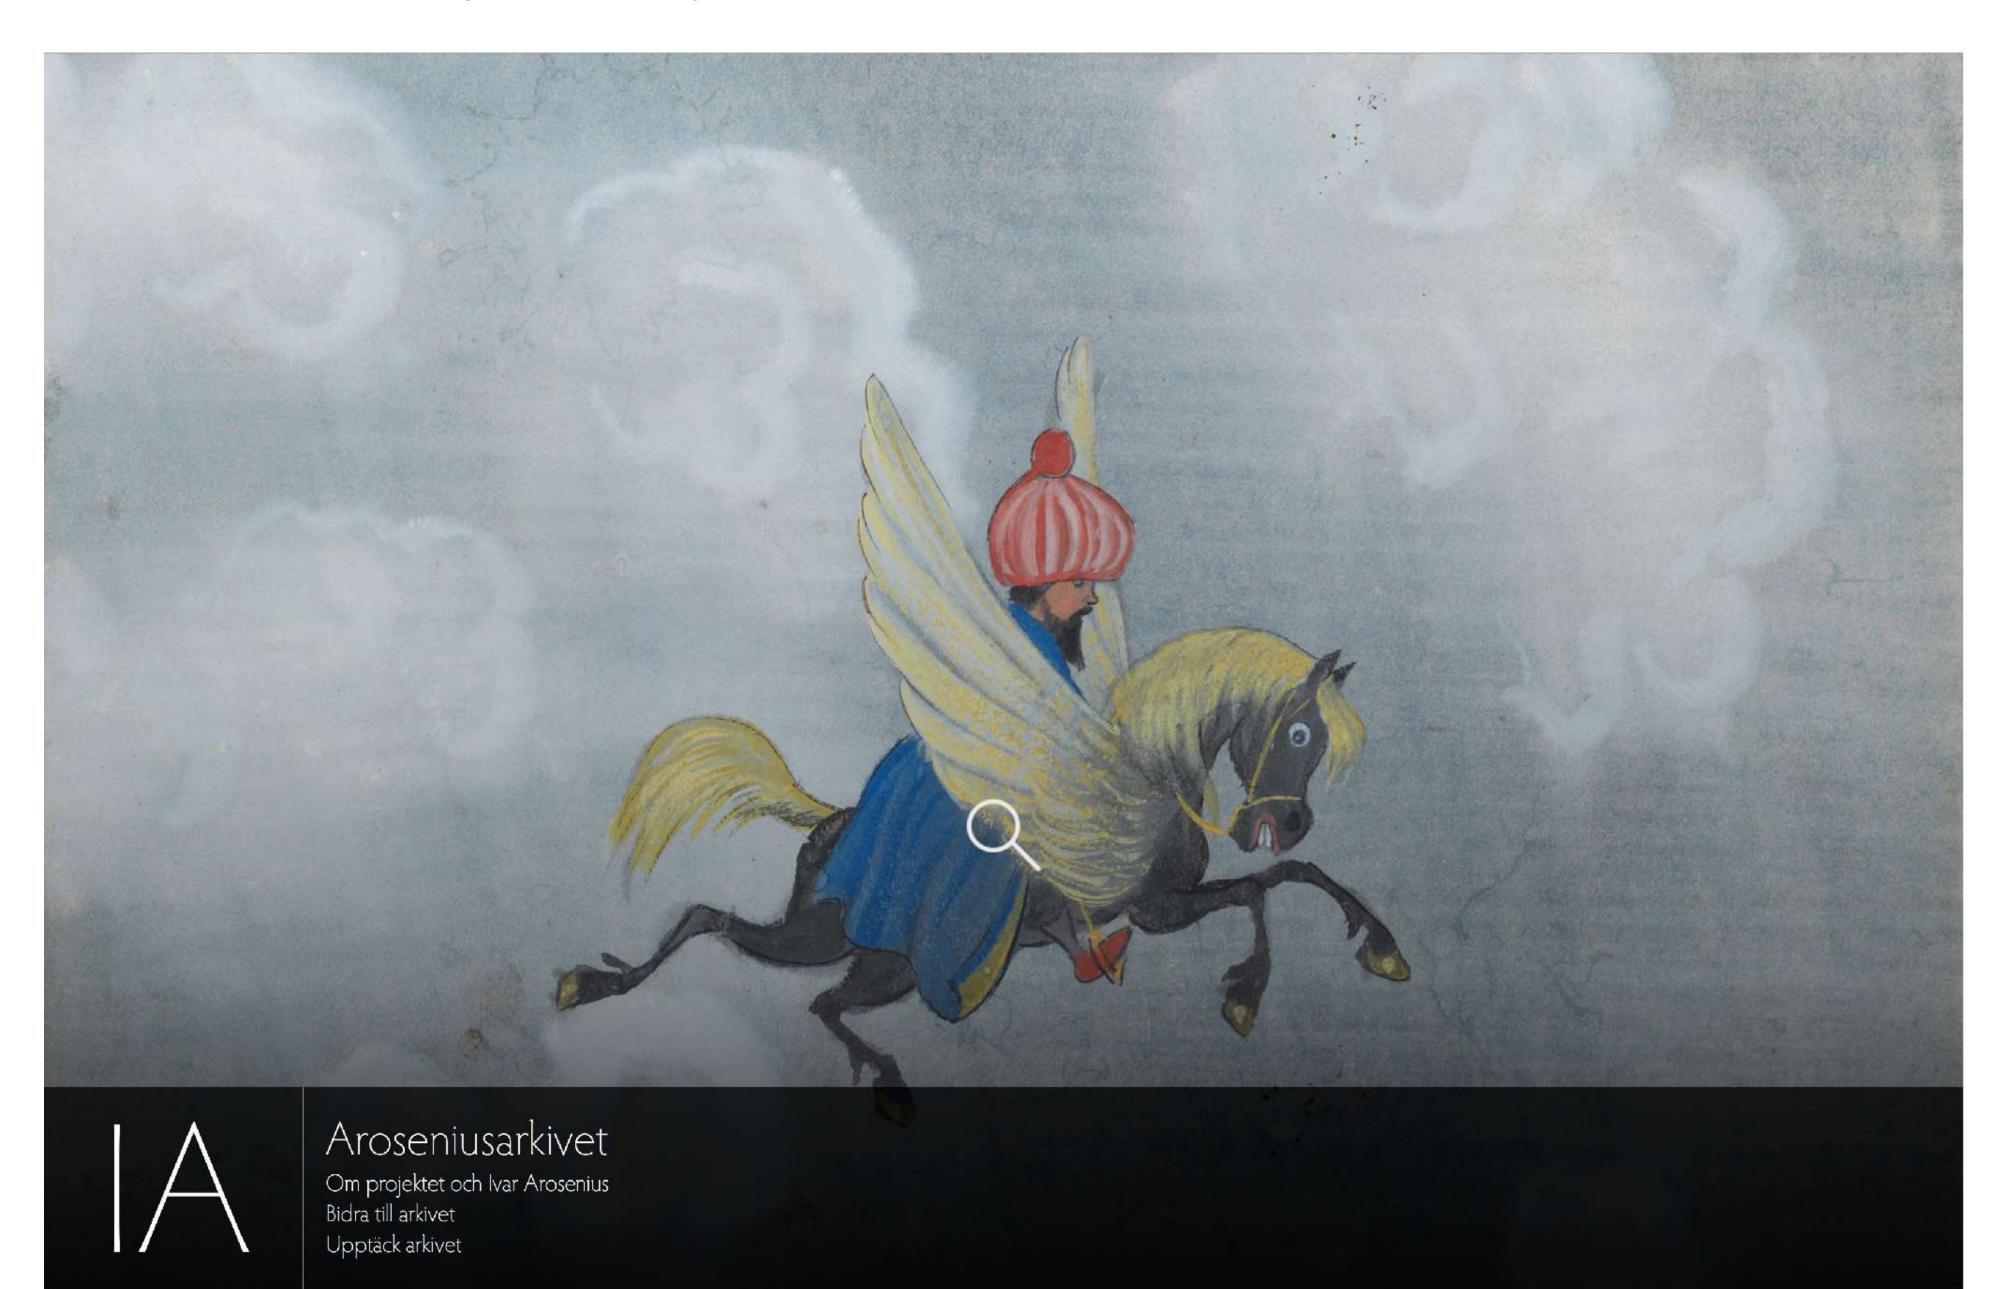

## Das Archiv in der App

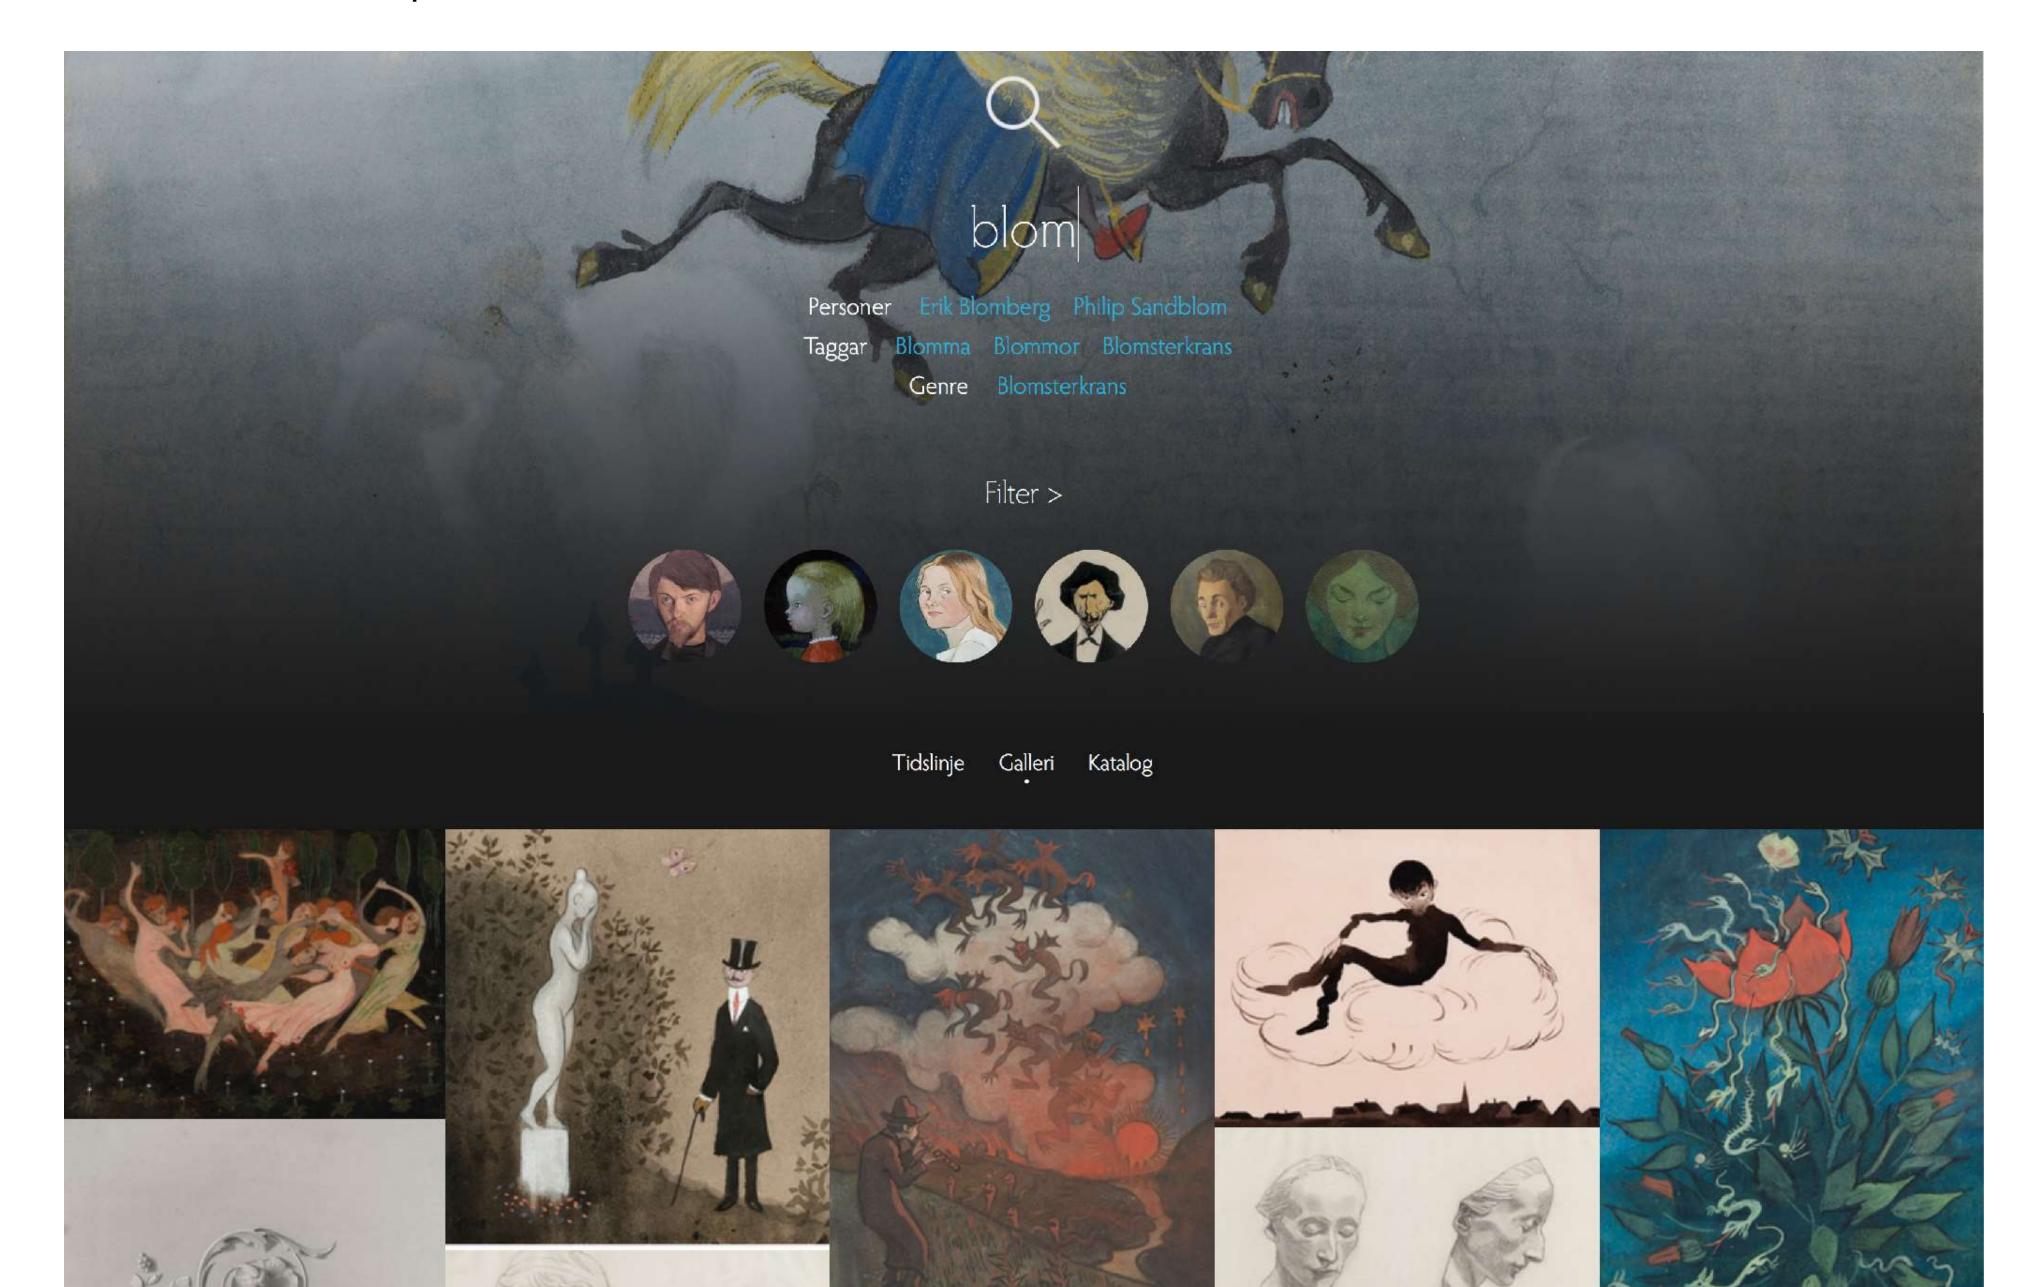

Dr. Alexandra Herlitz und Dr. Jonathan Westin

Universität Göteborg, Schweden

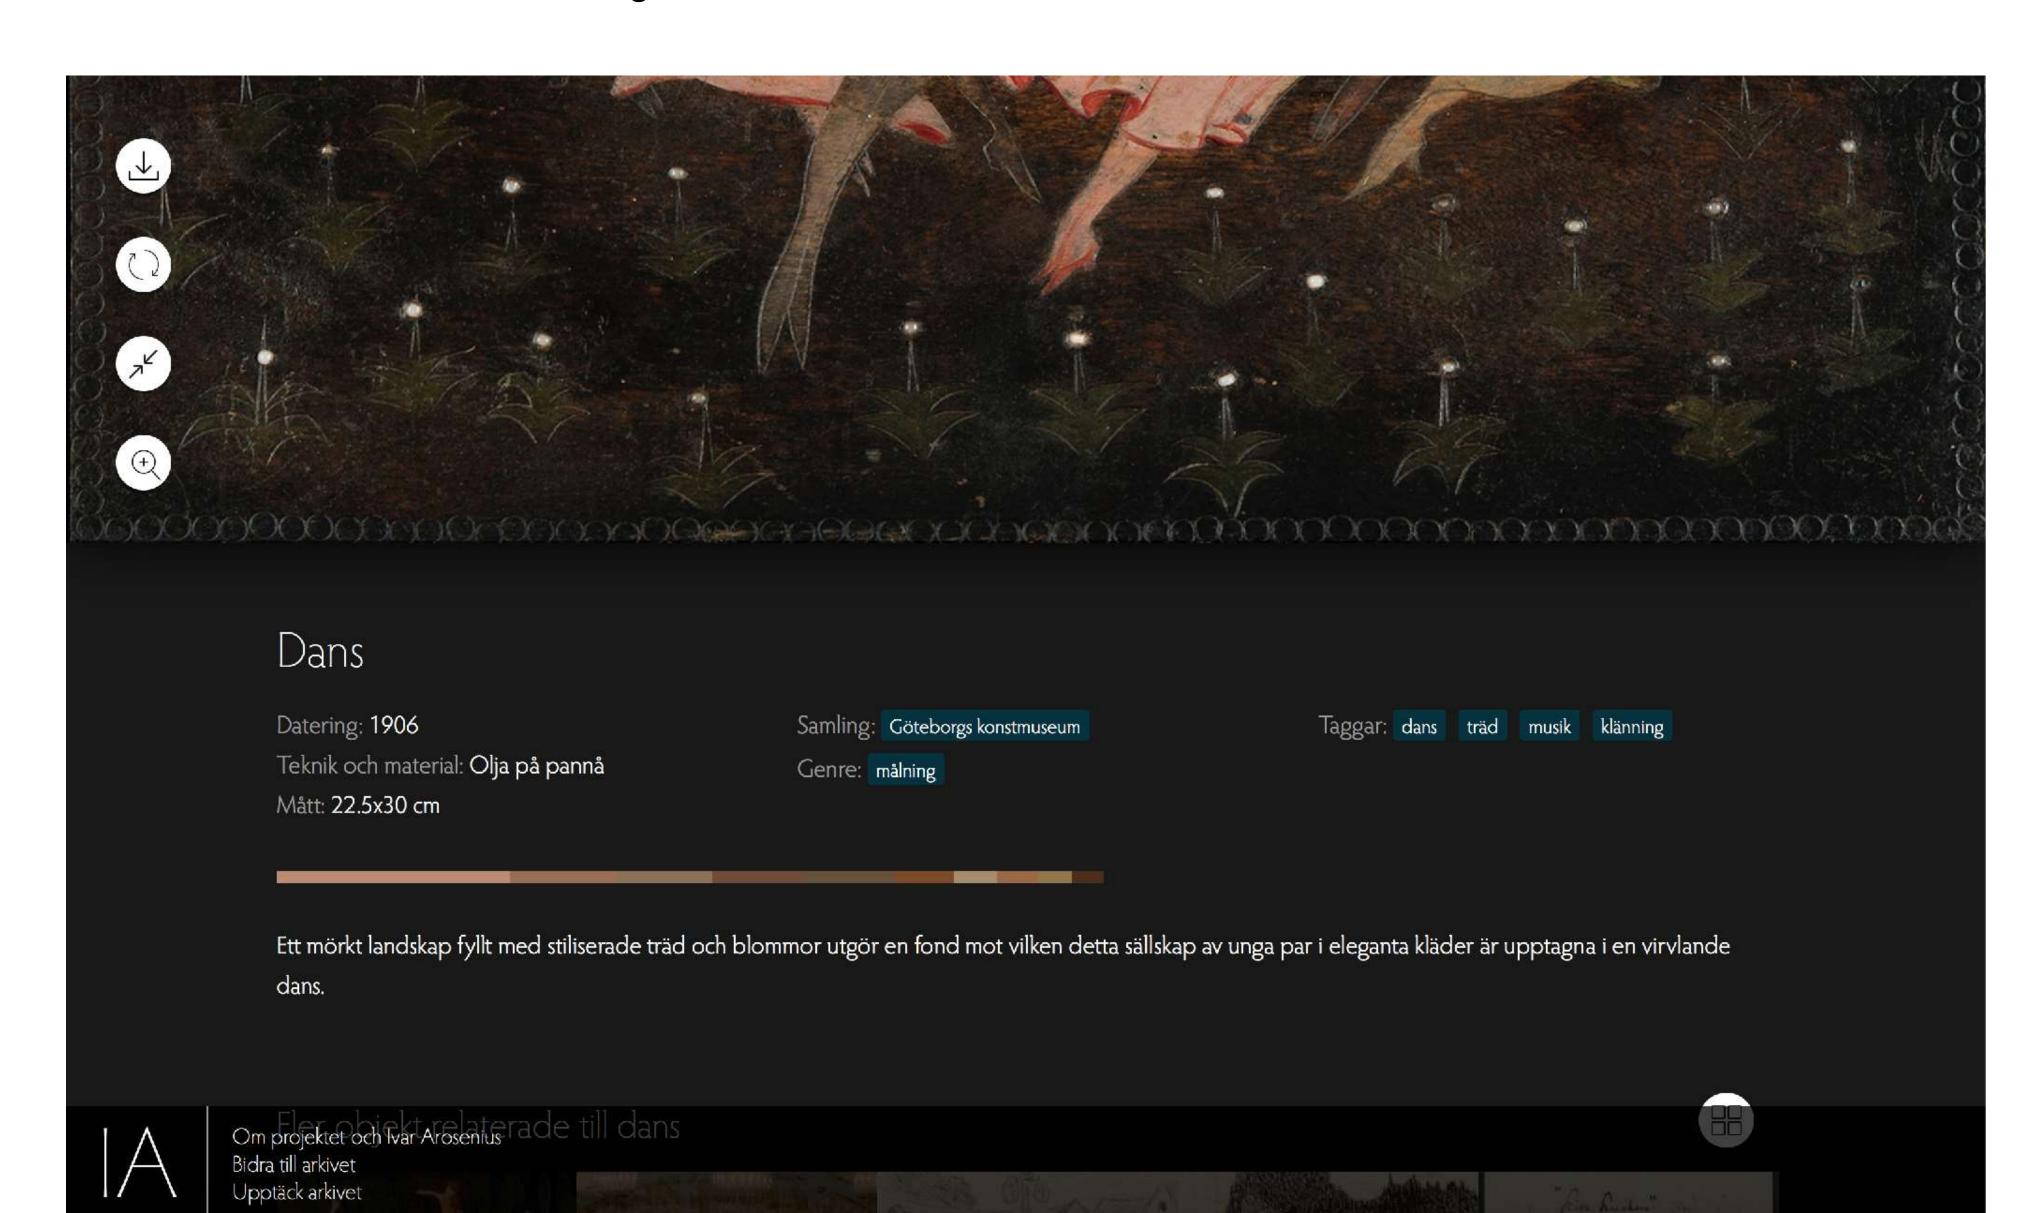

In the project we have digitised three large collections of material pertaining to Ivar Arosenius. This material is organised through an online database.

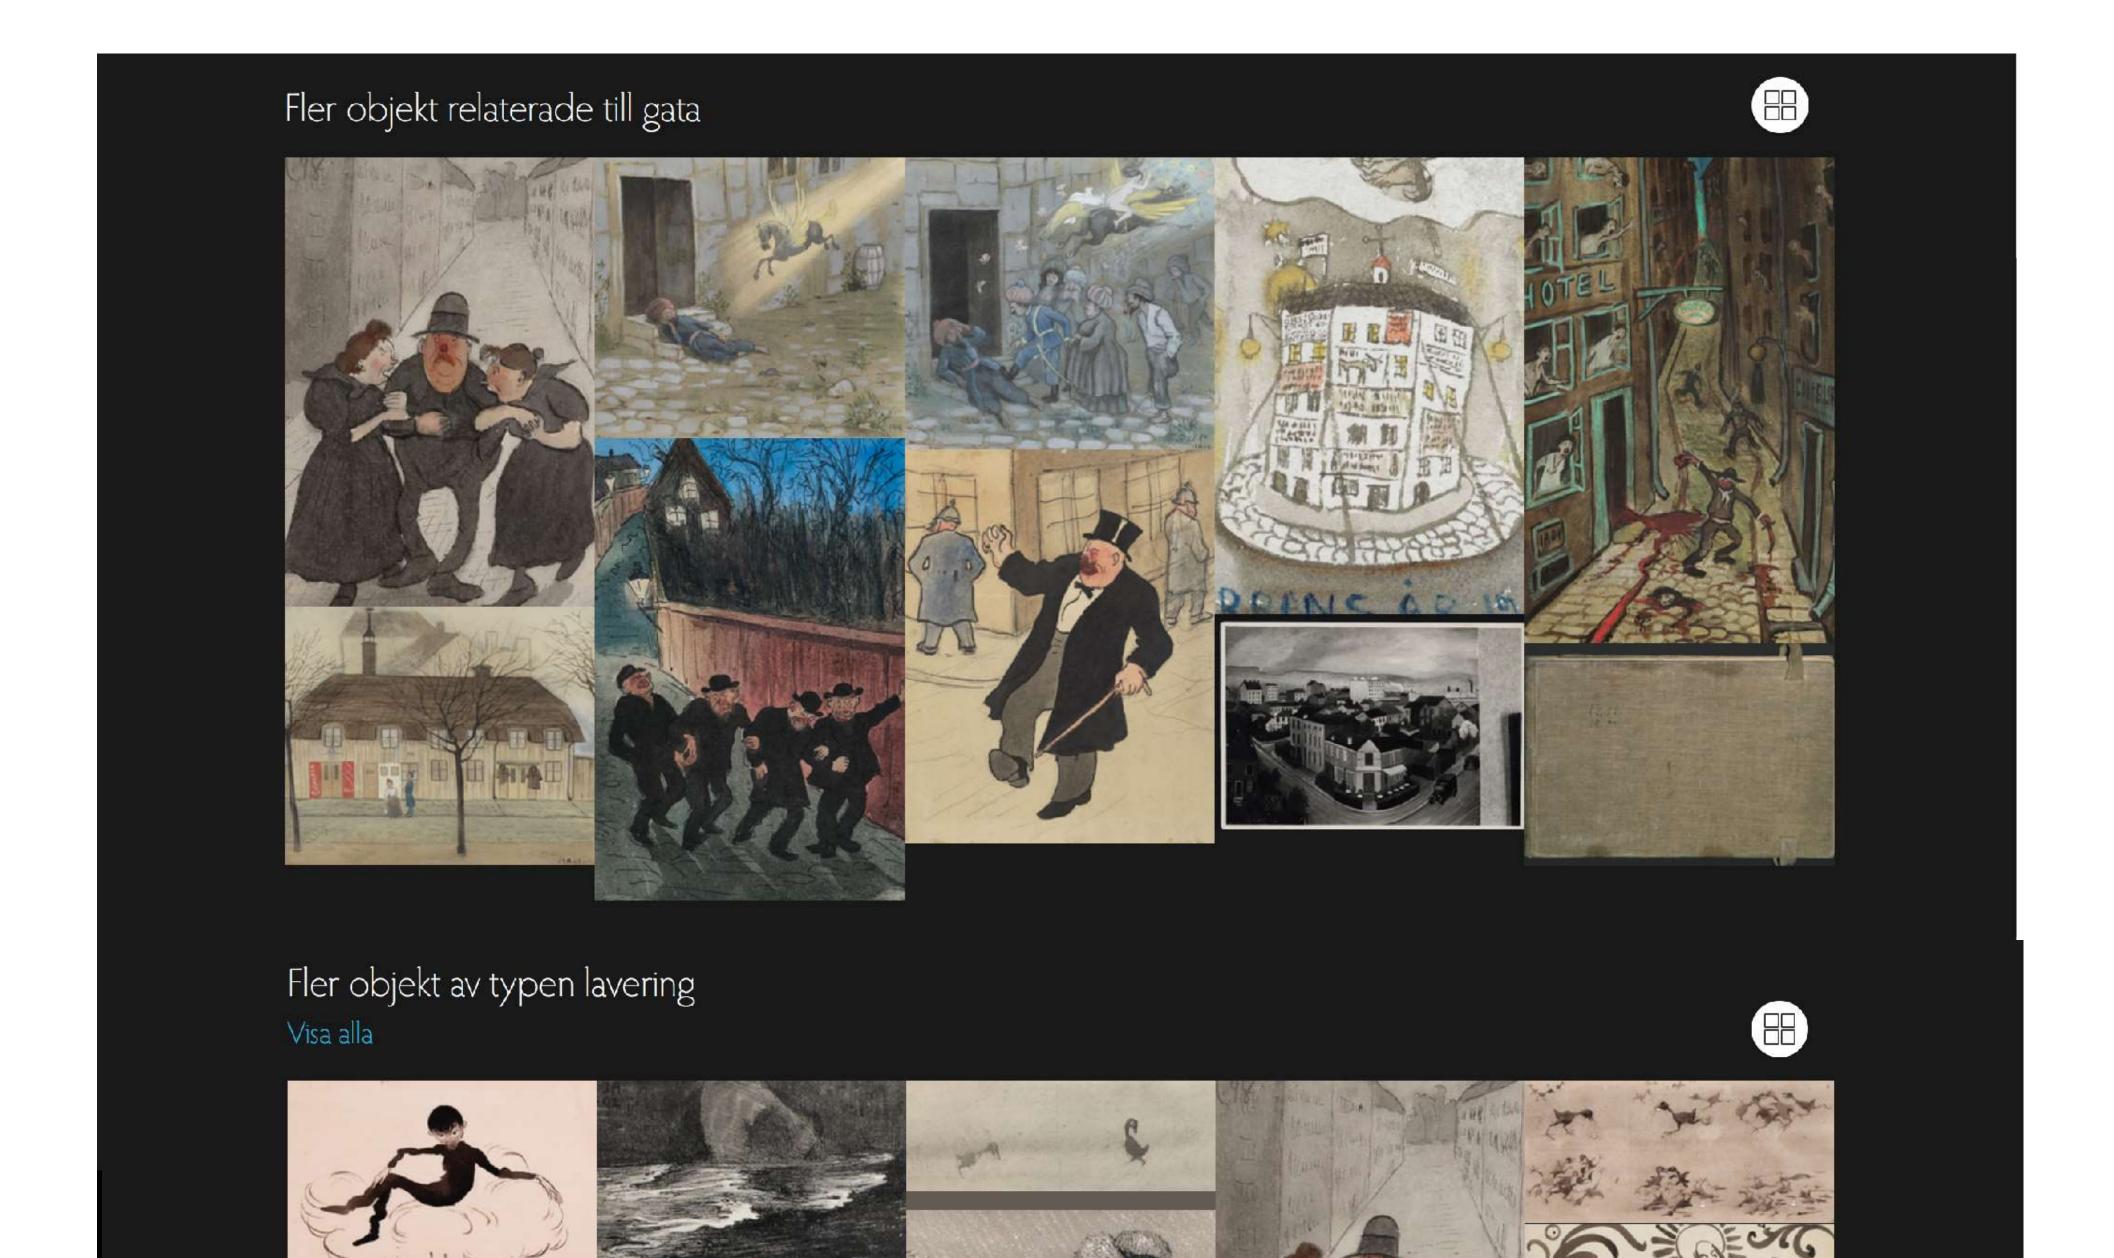

We have built a filter system exposing relevant persons, colours and metadata, all in a way that tries to look as little as possible as a database.

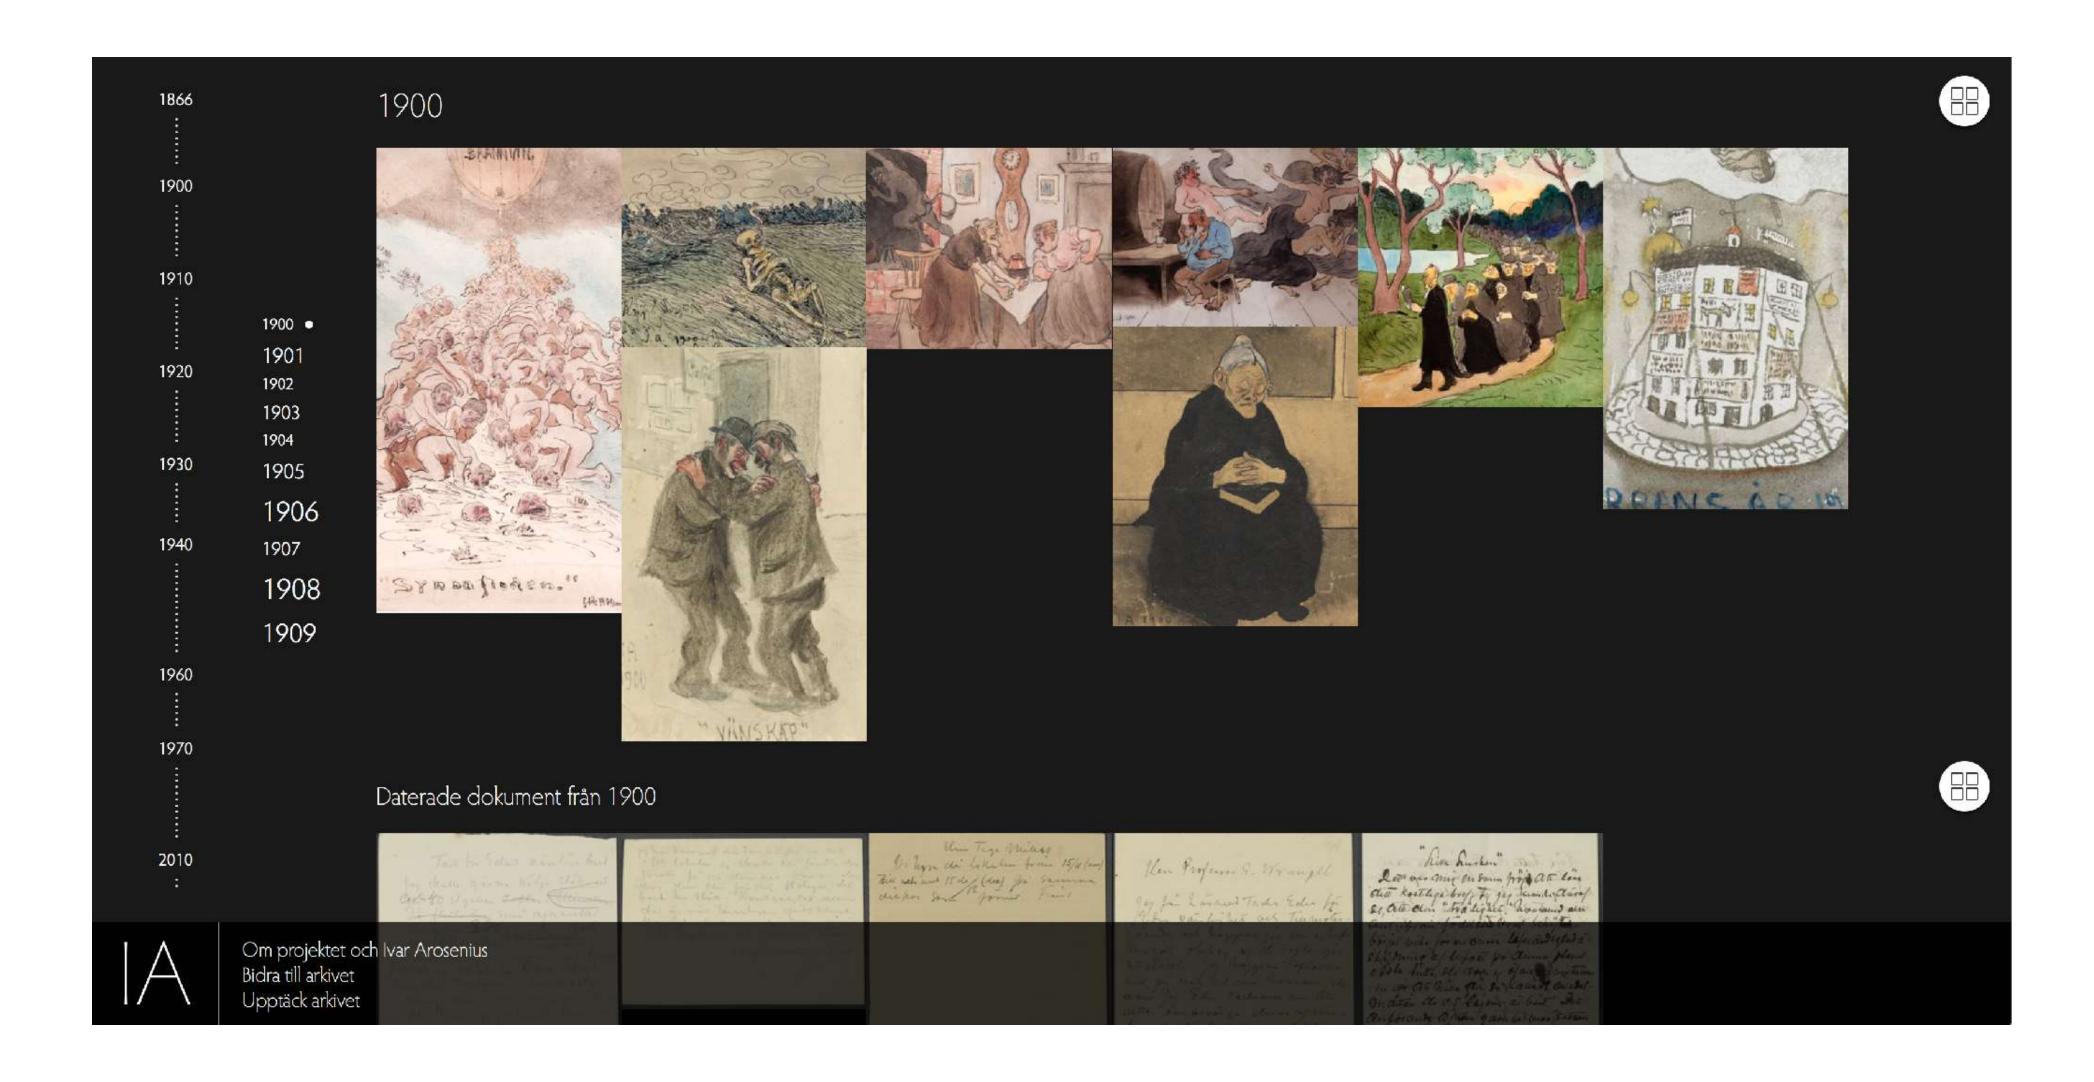

we have put a lot of work into the manual labour of writing meta data, but we have also used machine learning.

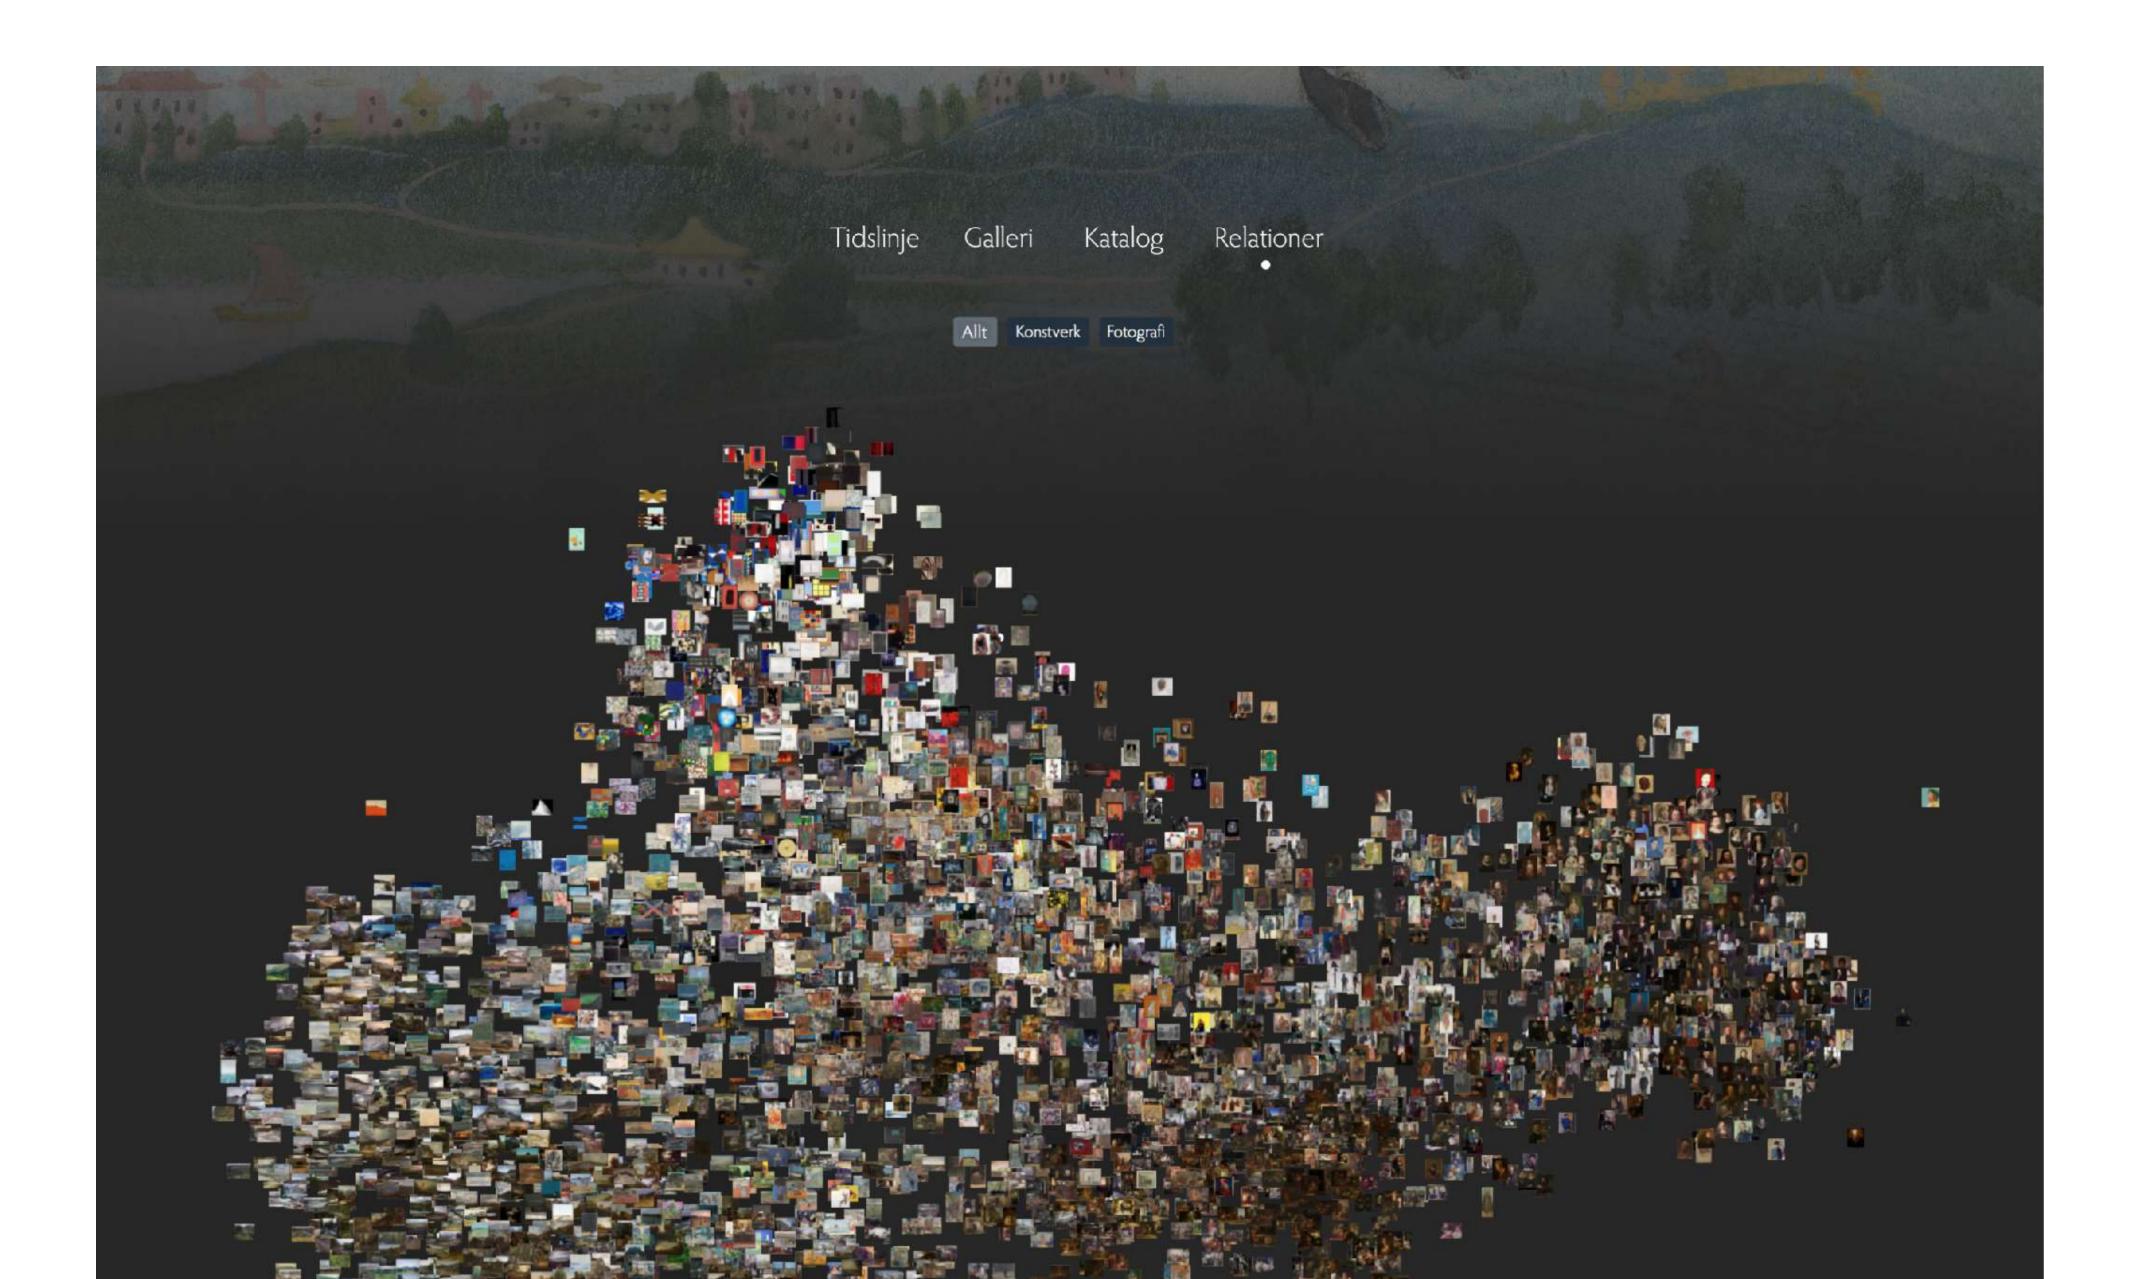

This allows us to automatically generate micro galleries based on an object so you are encouraged to browse through the archive.

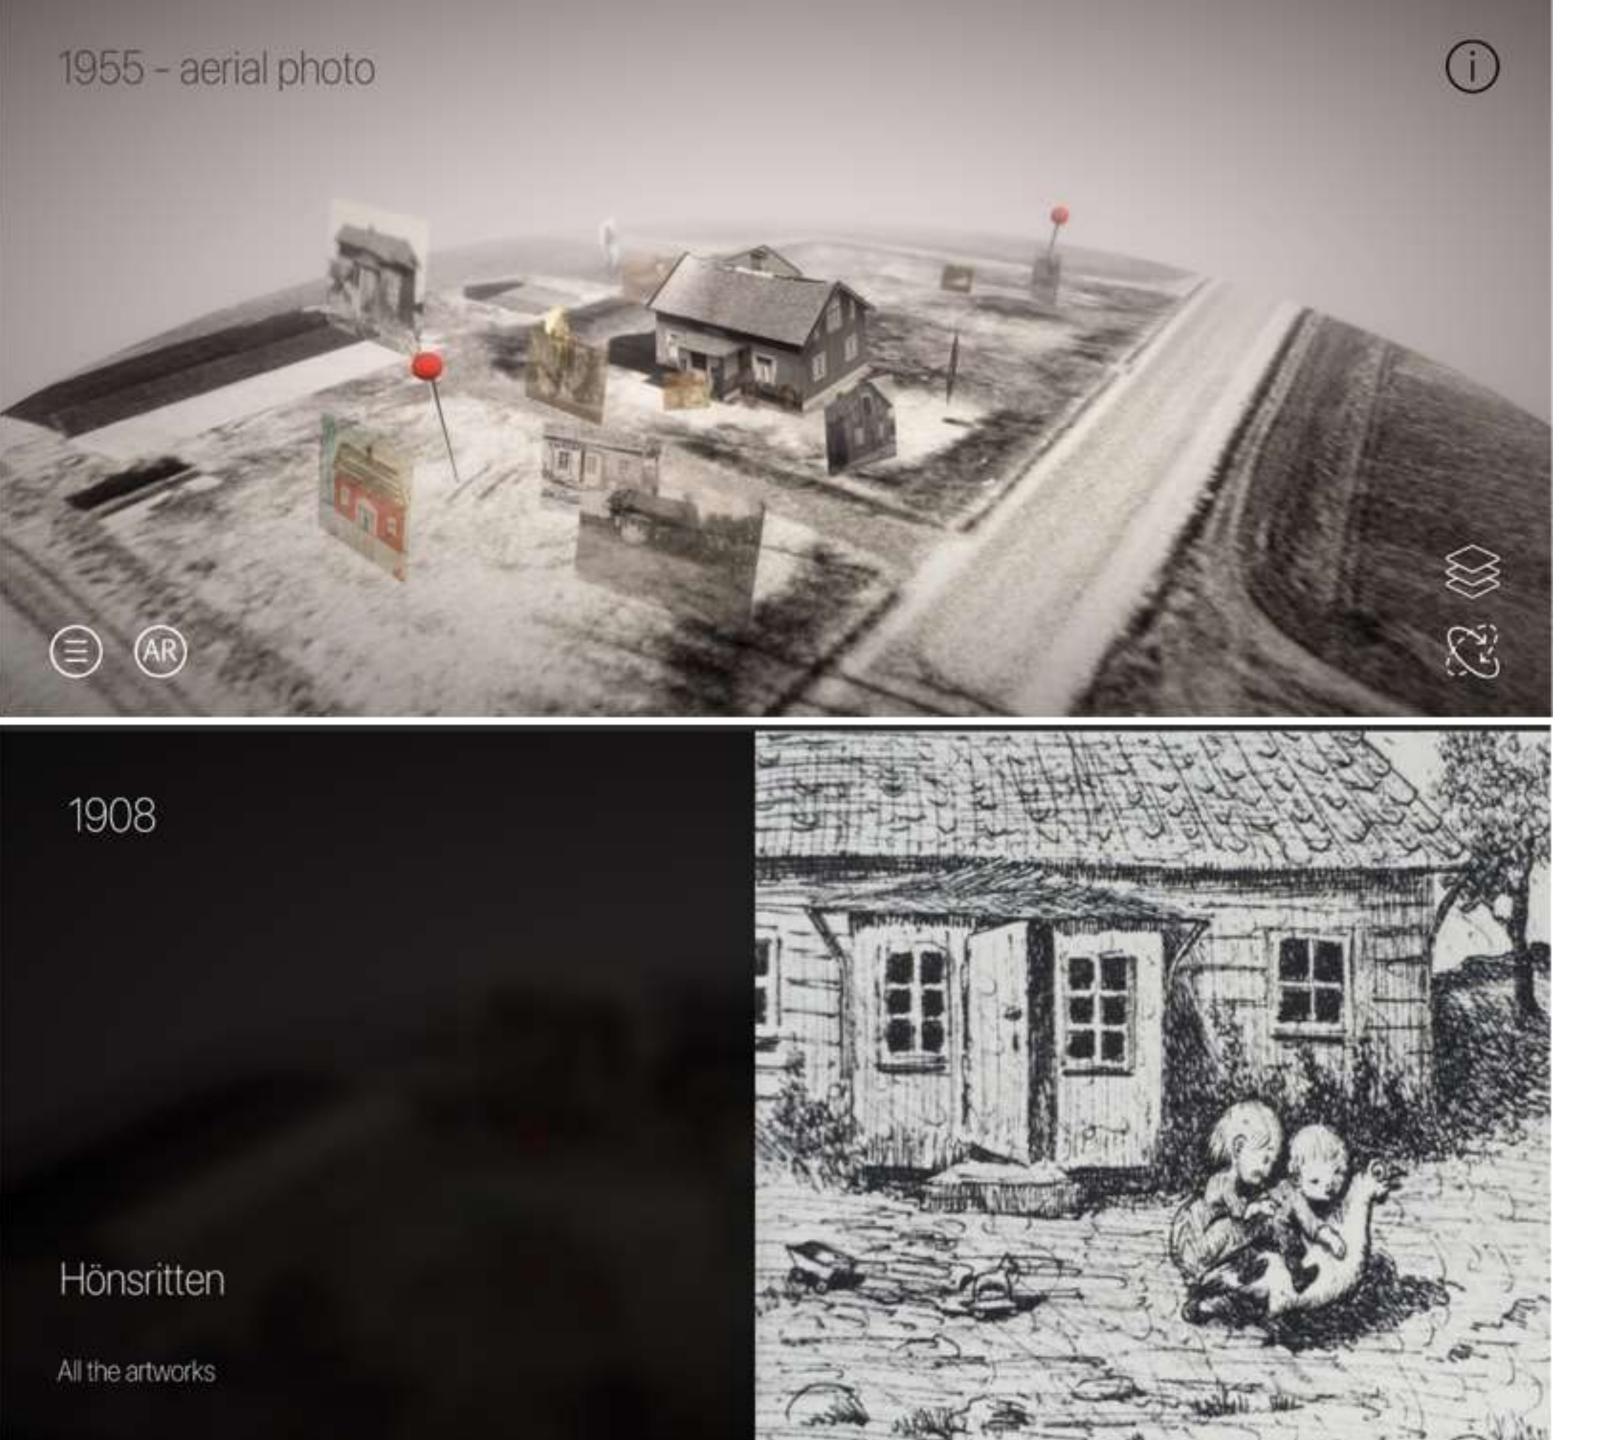

There are timelines, sortable lists, networks and colour searches.

Or you can group the artworks according to motif, colour or style.

Contextualisation of archive material from the artist's home

Reconstruction of the artist's home
